

MEDINOVA

Hospital Made Easy

INTRODUCTION

No one likes waiting but what if it's a matter of life or death; you're left with no other option but to wait.

long lines are anyways cumbersome however filling up that hospital form is even worse with all your personal information as most hospitals won't even look at you until the process is done.

We at Medinova put an END to this.

PROBLEM STATEMENT

Lines lines lines !!!!
Neverending lines are
always seen outside
hospitals. Even after u've
entered the hospital, u have
to fill forms with your personal
details and other
information needed by the
hospital which is definitely a
criminal waste of time.

MISSION

Shorter Lines Outside Hospitals

We've seen and must have also dealt with the long lines outside hospitals just to enter them. Our mission aims at lessening these and eventually removing these lines outside hospitals so every citizen has can enter the hospitals without having to spend hours in cues

No Time Wastage In Filling Forms

Registration forms are definitely a pain as the patients are not admitted or given a bed until the form is filled. We completely eliminate these registration forms with our state of the art facial recognition system, automatically entering all data needed

Increase Security Of Hospitals

Often we've noticed large number of people entering hospitals and this can pose as a danger to patients. We look into fast scanning of everyone entering the hospital and only those people can enter whose data is pre-given to us.

OUR SERVICE

Facial Recognition

We provide facial recognition for smooth functioning of registration for the patients.

SMART BOT

The bot we provide can screen to all the medical records and provide faster response on conditions regarding patients

STORAGE FOR MEDICAL RECORD

The amount of space that goes to waste for the medical record of a patient is tremendous so we reduce it into a single computer.

IMPROVED SECURITY

We at Medinova, improve security by barring entry of unknowns because everyone who enters, enters with the facial recognition.

OUR PROJECT

We can all agree life is precious , irrespective of race, religion, etc. Hospital lines and the time taken for registration of the patient could be the deciding factor in the patients life. We try to not only save your time through direct facial recognition and also improved security of the hospital cause every person entering the hospital is registered directly into the system. Thus not allowing strangers and other peculiar people to enter the hospital thus reducing threat face

NOVELTY

Our website provides a blend of features in addition to other features most platform don't cater to

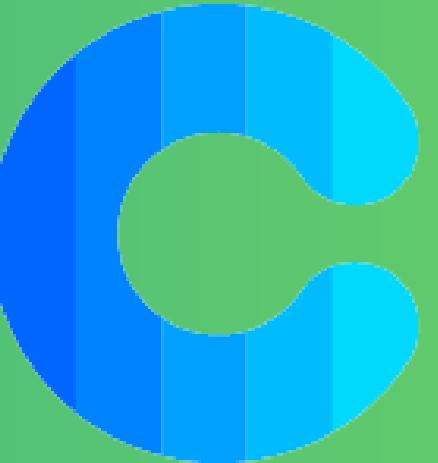

- Facial recognition used in Nair Hopital, Malabar Hill, Tardeo
- Easy flow of data between Patient and Hospital
- High security provided so hospital is secure both physically and over the net.

SECURITY

Tools used:-

1. Flask
2. Bootstrap
3. AWS
4. Trello
5. Coolors.co & Canva
